

# MEGGABOOM

PORTABLE, RECHARGEABLE, MINI BASS SPEAKER SYSTEM

Small Size, Big Sound!

# Portable. Versatile. Clear, Big Sound.

MEGGABOOM™ is a patented mini speaker with attitude and style. Sleek lines, special louvered openings and a pop-open chamber denote technological advances in audio design to maximize sound quality in a small size. Perfect for expanding the sound system of an i-Phone, i-Pod, Mobile Phone, MP3 player, portable game player, portable DVD player or computer. MEGGABOOM™ fits right into a pocket, a purse or small bag so you can bring along the larger sound for your small, personal devices.

In business, MEGGABOOM™ excels in use as a component of a conference phone system as it can be placed at a distance from the microphone input. The larger sound allows a small group of individuals to converse without any difficulties. With two MEGGABOOM™ speakers in a stereo configuration through a MEGGABOOM™ Splitter, it is possible to further enhance the sound system.

The big sound of the MEGGABOOM™ comes from its special pop-open chamber that magnifies sound waves and generates larger sounds. With the fun of its egg shape and the special configuration for sound, MEGGABOOM™ is ready to be used by consumers of all ages. Just flip the "on" switch and then, recharge MEGGABOOM™ when its battery light gets low. The battery should last at least 8 hours and up to 10 hours on a full charge. For details on the specs, see the information below.

## Product Specifications

Unit Weight	190g
Unit Size	6cm width x 7.6cm height
Units per 20-foot Container	33,600
